

The image displays a complex genomic visualization, likely a genome browser or a specialized analysis tool. It is organized into several horizontal tracks and panels.

- Top Panel:** A reference genome track showing a color-coded scale from 0 to 100. Below this, a large grid displays genomic data across numerous chromosomes, with a color scale on the left ranging from 0 to 100.
- Bottom Panel:** A detailed view of a specific genomic region, with a color scale on the left ranging from 0 to 100. This panel includes various genomic features such as genes, exons, and introns, and is presented in a highly structured and organized manner.

The visualization includes various genomic features such as genes, exons, and introns, and is presented in a highly structured and organized manner.
