

Figure 1 displays four genomic tracks for the 1000 Genomes Project. The tracks are labeled (a) through (d) and show the distribution of variants across the genome. The tracks are: (a) Reference genome (GRCh38), (b) 1000 Genomes Project (1000G) variants, (c) 1000 Genomes Project (1000G) variants, and (d) 1000 Genomes Project (1000G) variants. The tracks show the distribution of variants across the genome, with the 1000G variants track showing a high density of variants in the 1000G population.
